

BHP

Team Highlights

Working with the team to achieve a lot of progress!

The hosts (friendly, helpful and knowledgeable) and just being out in nature.

Learning about the impact of invasive plants.

Planting the trees and seeing the difference.

Learning new things about native plants.

Planting in the sunshine.

Team work.

AT ONE WITH NATURE!

Armadale Gosnells Landcare Group (AGLG) is a community led group that coordinates landcare planning, river restoration, bushland management, community action and community awareness programs. With the help of thousands of volunteers each year, AGLG focuses on implementing on-ground restoration and revegetation projects as well as educating the community about local Landcare issues. These on-ground activities mainly involve planting native seedlings (trees, shrubs, herbs, sedges and rushes) and removing priority environmental weeds.

On Tuesday 17 August, seven enthusiastic volunteers from the NPI People Logistics team dedicated their morning to assisting AGLG at Banyowla Regional Park in Kelmscott. After an introduction from Shane, the team put on their gloves, applied their sunscreen and got straight to work. The team were tasked with removing a load of watsonia from the site (a very common and invasive environmental weed), and then planting native seedlings in its place. The work would assist the Friends of Banyowla Regional Park Clifton Hills in their efforts to restore an area of this park infested with watsonia to a more diverse bushland, which will provide a better habitat for wildlife. It was an amazing effort by the team, who worked tirelessly under the winter sun and made a huge impact on the site - removing a massive trailer load of watsonia, and planting over 500 native seedlings in its place! It was a productive, fun and rewarding day. Thanks to this awesome team.. AGLG greatly appreciated the team's help and assistance!
