

BHP

REUSE RESOURCES

Since 2005, they have been collecting valuable resources from businesses. Their offcuts and discards provide unique resources for their education workshops and their members. Much of their work is with schools, providing a unique education for children to learn the value of recycling. Finding beauty in the unexpected, REmada WA strives to foster a cultural shift towards the revaluing of waste materials and educate for a more sustainable future. In 2008, REmada WA was incorporated and relocated to a larger premise in West Perth, allowing the centre to attract even more enthusiastic members! And in 2020, REmada took the very important step of registering as a charitable organisation dedicated to creating sustainable communities where children can flourish in education rich environments.

On 21 October, eight enthusiastic volunteers from BHP's Port Engineering GTS Structural team contributed their Thursday to volunteer at REmada, which is located in West Perth. After an introduction, the team was eager to help. It was the first BHP team that volunteered at REmada. The team split into several groups and worked on various tasks, such as cutting vinyl papers, folding fabrics and tidying up their main storage room, magnet stripping, fork and knife sorting and cutting pipes. It was a day filled with different activities and team gave an enthusiastic energy throughout the day, whilst learning more about REmada's purpose. The organisation greatly appreciated the team's help, time and assistance. Well done!
